

## Blue Horizons Commercial Super Cleanse

### Key Features/Characteristics

- ✔ Powerful cleaner for pools & spas
- ✔ Removes biofilm

Warm swimming pool & spa water can provide the ideal breeding ground for bacterial growth. As bacteria starts to form on surfaces and in pool and spa pipework, biofilm can begin to form. Biofilm is extremely resistant to chlorine. Blue Horizons Commercial Super Cleanse is a highly effective cleaning agent that penetrates the biofilm and helps remove the bacteria.

### Application Instructions

1. Isolate your chlorine, redox & pH probes from the pool or spa water.
2. Isolate any chlorine or bromine feeder prior to product application.
3. For systems with a cartridge filter, remove & clean the cartridge, then return to service before treatment starts.
4. **CAUTION:** Do not use the pool or spa during Super Cleanse treatment.
5. Refer to table below for number of tablets required for treatment.
6. Wear suitable protective gloves & eye protection when handling product.
7. Use scissors to cut open the sachet(s) and carefully drop the required number of tablets around the pool or spa perimeter with the pump(s) running.
8. After 15 – 20 minutes, backwash your filter. The pool or spa will be safe to use after 8 hours.

Dose Rates				
Water Volumes		Number of tablets require		
Litres	Gallons	Public Pool	Public Spa	Private Pool
1,000	220		4	
2,000	440		8	
50,000	11,000	16		8
100,000	22,000	32		16
200,000	44,000	48		

### Other Applications

To clean a biofilm covered surface such as floatation aids, covers, channel grates or around the pool side and in changing areas, use the following dose rate:

1. Add one tablet to 20ltr of water (using a clean bucket) and allow the tablet to fully dissolve.
2. Apply the solution to the surface to be cleaned, leave for 5 minutes and then wash off with clean water.
