

The SuitSpin Swimwear Dryer

Removes 95% of water from wet swimwear in just 10 seconds.

No more wringing out of swimwear, just happy swimmers and a dry facility.

Wet swimsuits can be a real problem for both swimmers and pool/spa facilities, but no more thanks to the SuitSpin swimwear dryer. These machines help to ensure pool water does not damage a facility by keeping floors and surfaces dry, which prevents the growth of mould and mildew.

The SuitSpin swimwear dryer not only benefits the facilities but also helps swimmers who take advantage of its fantastic drying properties. It is safe for all swimsuit fabrics and ensures that your customers do not have to carry them around in a wet bag.

As opposed to heat, the SuitSpin uses a centrifugal force to remove 95% of water from wet swimsuits in just ten seconds.

Suitable for a wide range of applications including:

- Leisure centres
- Hotels
- Spas
- Wet test show rooms
- Homes with pools and/or hot tubs
- Holiday lets with pools or spas

QUALITY MATERIALS

Our swimsuit dryers are built to last with the steel casing made from high quality AISI 316 stainless steel and the top cover made from a hard-wearing PE.

SIMPLE OPERATION

Operating the SuitSpin swim suit dryer is easy. Simply place the wet swimsuit inside the drum, close and hold the lid for ten seconds and when the cycle is over, open the lid and remove your dry swimsuit.

HIGH EFFICIENCY

The swimsuit dryers are fitted with a powerful motor meaning they can extract up to 95% of water from swimwear within ten seconds.

EASY TO CLEAN

Both the inner and outer drum is accessible making cleaning of your SuitSpin quick and easy.

ENVIRONMENTALLY FRIENDLY

By installing a SuitSpin swimwear drying, you eliminate the need to provide plastic bags for swimmers to put their wet swimsuits in.

Additionally, an average of 20,000 litres of water is returned to the water system each year which can then be re-used.

SAFE TO USE

Not only is SuitSpin simple to operate, but it is also very safe.

It does not use any heat, and instead uses a centrifugal force to remove water from wet swimsuits. There are no exposed moving parts and it is operated with a manual start and self-stop mechanism.

A RANGE OF COLOURS AND DESIGNS

The SuitSpin swimsuit dryer is available in a range of colours ensuring there is a model that will fit the décor of your facility. At our UK facility we have the popular blue and white models in stock and ready for despatch, with the other colours available as a special order

BESPOKE DESIGNS

However, if you are looking for something unique which features your branding or marketing message then we are able to work with you to create a bespoke design for your SuitSpin swimsuit dryer.

WATER CONTAINER

If you are not able to connect the SuitSpin swimsuit dryer to a waste outlet or drain, then we offer a water container made from high quality PE.

Designed to complement your SuitSpin, the unit is installed on the wall below the machine to collect the extracted water. It has a capacity of 18 litres and once full, will need to be emptied manually.

SuitSpin swimwear dryers are stocked and ready to despatch from the UK.
