

HEAT PUMP CLEANER

Heat Pump Cleaner is a unique non foaming heavy-duty cleaner specifically designed for the cleaning of heat pump evaporator fins. By removing everyday dirt and pollution the heat pump always maintains its efficiency; maximising performance and reducing energy consumption and running costs.

GENERAL INSTRUCTIONS

1. Before using the product always ensure that the system is shut down and power has been disconnected.
2. At a distance of at least 5cm (50mm) spray the unit to be cleaned evenly starting from top to bottom. Ensure that the heating/cooling spiral is completely covered with the cleaner.
3. Allow Heat Pump Cleaner to soak on the treated area for approximately 5-10 minutes.
4. Wipe the treated area with a clean microfibre cloth to remove all debris.
5. Then wipe with a clean cloth to remove the dirt, and rinse lightly with fresh water.

Please note: For heavily soiled Heat Pumps a second application may be necessary.

PRODUCT ADVANTAGES

- ✓ Ready to Use product – no need for dilution.
- ✓ Can be used on both Evaporators and Condensers.
- ✓ Non-corrosive – will not damage the heat pump fins.
- ✓ Fast cleaning time or no more than 5 – 10 minutes.
- ✓ Unique trigger spray to maximise dispersion.

PROFESSIONAL TIPS

CAUTION: Cleaning with a high-pressure cleaner and/or physically using a cloth can cause the evaporated fins to be pushed flat. Damaged fins will significantly reduce the surface area for heat transfer, resulting in inadequate cooling, increased energy bills, and decreased efficiency.
